MasterCard Teams Up With Big Brother?!

BY JOANN BRUSSO
SPECIAL TO KCN

Big Brother is here!

We knew it was coming. We've been talking about it for years. We've debated what it would look like, how it would be sold and implemented. yet, somehow it seems too soon.

While in Arizona, Andrew, my son-in-law, saw a very interesting commercial. A woman is pictured in an empty white room. As numbers whiz by her head you hear them being read: social security, checking account, credit card, drivers license, health policy, telephone, fax, etc.

A voice asks, "How can you remember them all? Then it declares, "Master Card is working on the solution. The one-digit pin.

The camera focuses on the back of the woman's right hand; she flips it over and you see a close-up of her index finger with a pattern of dots. The voice-over states, "Your personal mark." It then proudly announces, Master Card will bring this to you in the future!

Wow, what marketing strategy! A new mark solving the problem of remembering all those numbers. Lost or stolen cards become a problem of the past. Just scan your finger and instantly vital information is recorded and decoded.

Andrew said he about fell out of his chair when he saw the "mark" commercial. Although, all the signs indicate we are not too far away from this technology, Andrew didn't expect to see an advertisement for the personal mark during prime time TV.

The microchip is a tiny chip about the size of a grain of rice. It is implanted under the skin. One chip placed in the wrist, hand, or maybe even your forehead, it will take all the fuss and muss out of buying and selling. No more groping for the right card or trying to remember your credit card or insurance policy number.

Personal records could be programmed into the chip noting name, address, health history, allergies, family doctor, and telephone numbers of relatives to call in an emergency. A person's education and work

history could be included as well.

Why this handy, dandy chip could contain your passport, drivers license, and other important documents. Isn't modern technology wonderful?

In Revelation 14, another person gives us a glimpse of the future. The Apostle John relates his vision in which those who receive the "mark" in the forehead or hand will be giving their allegiance to the beast and the end result for people with this mark is to be "tormented with fire and brimstone."

We know, of course, the chip initially will be voluntary and the public will be sold on its utility, but the ultimate goal is to control people. Those who do not have this mark will no longer be able to buy or sell and eventually, refusal to bear the mark will end in death.

Before credit cards and computers, Americans were fiercely independent. The idea of personal information being filed, cataloged, and coded was repulsive. Like the proverbial frog in the pot of water in which the temperature is slowly increased,

we have become desensitized to ever-increasing danger.

If the public can't be sold on the personal mark through convenience, the government plans to use our children. Up to this point, the strategy for the allegiance of the next generation has been a relative soft sell; promoting a one world agenda through children's TV programming, movies, and government schools.

Dads and moms could still counter the damage by training their children in God's Word after school and/or with private or home schooling.

The plan to implement the United Nation's Rights of the Child is a giant step toward government control of children (and ultimately families).

Of course, those who hold to the belief that there is only one God and one way of salvation are characterized as intolerant, bigoted, and narrow-minded. Master Card does not disclose which "one digit pin" will solve the complexities of the 21st century. My guess is it's a six; a six-digit, repeated three times 6 - 6 - 6
